- VMware Infrastructure 3
- VMware VirtualCenter
- VMware ESXi
- VMware Server
- VMware Lab Manager
- VMware Site Recovery Manager

Desktop Virtualization

- VMware Virtual Desktop Infrastructure
- VMware Workstation
- VMware ThinApp (English)
- VMware ACE
- VMware Player

COMPLEMENTARY TECHNOLOGIES

Vizioncore (Data Backup),
Datacore (Data Protection)

CERTIFICATIONS

VMware Infrastructure 3 Enterprise, met:

- 1 VMware Certified Professional (VCP)
- 2 VMware Sales Professional (VSP)
- 2 Microsoft Certified Systems Engineer
- 1 Microsoft Certified Developer

"Virtualization is broken down into many different sectors, including storage, server and desktop technologies; all have a variety of vendors bringing products to the market. However, full datacenter virtualization has become synonymous with one dominant vendor - VMware."

Christoph Wilfing

HATAHET Productivity Solutions

HATAHET Productivity Solutions

Since 2006, HATAHET Productivity Solutions has primarily focused its efforts on delivering solutions around technologies such as Microsoft Office and Microsoft Office SharePoint Server 2007. The company is a Microsoft Gold Certified Partner and based in Austria.

HATAHET has implemented infrastructure and messaging solutions for customers of various sizes, from small and medium sized enterprises to large companies such as Constantia Duropack AG, one of the most important suppliers of raw materials in the Balkans.

After attending a VMworld conference, HATAHET made the strategic decision to expand its range of services and products to include virtualization software, and the company now offers a full range of VMware solutions. By delivering applications on virtual infrastructure from VMware, HATAHET creates the most flexible and robust IT infrastructures available for its clients.

HATAHET's understanding of virtualization enables them to deliver a range of solutions for their customers, including infrastructure optimization, backup, disaster recovery, test and development automation and virtual desktop infrastructure. The usability of VMware's technology enables customer ideas and requirements to be implemented quickly; it is the exceptional flexibility of VMware software that permits certain projects to be completed on-time and on-budget.

"VMware has been a key technology partner in the growth of our business, enabling HATAHET to deliver effective, flexible and successful solutions to a wide range of customer briefs. VMware's breadth of technology allows us to approach customers of all sizes, looking to implement virtualization from the desktop to the datacenter," said Christoph Wilfing, HATAHET Productivity Solutions Principal Consultant for Infrastructure & Messaging Solutions

Advantages

- Rapid and simple protection and encapsulation of all applications
- Installation times for customers reduced by 80 percent on average
- Approximately 50 percent of customers currently use VMware virtualization
- A further 30 percent of customers plan to use VMware
- 90 percent of all SharePoint implementations now based on VMware
- Disaster Recovery is now economical for small and medium-sized enterprises – this leads to more demand for additional projects
- 100 percent client confidence in software that works perfectly
