# VMware Cloud Foundation License Portability – List of Certified Cloud Providers

This page is the official list of Broadcom certified cloud service providers offering either Infrastructure-as-a-Service offerings or integrated VCF offerings eligible for License Portability of VCF and applicable Add-ons*. For infrastructure-as-a-service offerings compatible with License Portability, refer to the Broadcom Compatibility Guide to verify that the underlying infrastructure of the endpoint is technically capable of running VCF. For integrated VCF offerings, reach out to your cloud service provider partner to verify region availability, and for more information please contact your local salesperson.

Infrastructure-as-a-Service Offerings

With Infrastructure-as-a-Service offerings, there are no changes in relationships that customers maintain with Broadcom, including directly receiving technical support from Broadcom. Furthermore, customers can self-manage the VCF environment or contract with third parties to ensure that the management options meet the organizational requirements in performance and security.
