Implement a Private AI Foundation

VCF Professional Services

At a glance

Accelerate adoption of your private AI foundation with confidence.

Key benefits

- Rapidly deploy a VMware Private AI Foundation with NVIDIA

- Protect intellectual property from leakage

- Manage and operate your new AI environment at scale

- Free up IT staff to work on business-critical tasks

Organizations want to leverage the power of AI, but don't want to sacrifice data privacy and security. These concerns along with a desire to customize AI for their business are driving demand for private AI solutions. While your team may be cloud savvy, you need to determine if they have the time, skills, and expertise to implement your private AI solution successfully. Do you know how to prevent IP leakage which is a primary reason for creating a private AI solution? Do you know how to implement a standardized, prescriptive architecture and then integrate it with your existing environment in a way that reduces your vulnerability to security attacks? Will your team know how to manage and operate the environment at scale? VMware Pro Cloud Service™ to Implement a Private AI Foundation can help.

Service overview

VCF Professional Services can help you quickly build and adopt a well architected VMware® Private AI Foundation with NVIDIA. Delivered by a cross-functional team of VMware experts, we leverage reference architectures to provide a standardized, prescriptive approach to deliver a tightly integrated solution.

Deploy, configure, and integrate the private AI foundation

We build your private AI foundation on an existing full stack VMware Cloud Foundation® environment. To stand up the private AI foundation, we start by assessing your existing VCF environment. We identify gaps and provide recommendations to get you to your AI-ready architecture. We deploy and configure the private AI foundation components and integrate with VCF. We deploy and prepare a scalable AI framework and data services. Then the NVIDIA Retrieval-Augmented Generation DLVM is deployed and validated. We define and prepare a private AI sharing model. Our experts customize the deep learning VMs or private AI clusters to be ready to accept your organization's chosen models, datasets, and training sets.

Operate the environment

Once your new private AI environment is in place, you need to be able to operate and manage it. We help you define new roles and skills for your private AI services team. We can assess your current skills, identify gaps, and provide knowledge transfer to help prepare your staff to manage your environment. We provide operational assistance for incorporating deep learning VM and data services into your existing processes.

Benefits

VCF Professional Services have the experience, best practices, and proven methodologies to make your private AI journey smooth and effective. Our deep knowledge of VMware technology can help reduce risk and complexity. Our standard and prescriptive approach helps to minimize disruption and achieve predictable outcomes. From deploying your private AI foundation to designing and preparing a private AI sharing model, we can help you build a well-architected solution to support your current and future needs.
